

FEMALE PARTICIPANTS NEEDED

THERMAL PERCEPTION OF THE FOOT

WHY? To investigate the perceptual differences to warm stimuli between different foot regions, and assess how this may vary with rest, running exercise, passive heating and cooling. This research will provide insight into the requirements for thermal comfort.

WHAT? 5 sessions at the Environmental Ergonomics Research Centre, Loughborough University.

WHO? Physically active White European females, who are aged 18-30yrs and have a shoe size of UK women's 6 or larger.

BENEFITS Reimbursement for your time, and your body composition
OF TAKING PART and oxygen uptake assessment results.
