

Make your own kaleidoscope

- Cut along dashed line
- Roll to form two tubes
- One tube should be narrower than the other, so it can fit inside
- Use tape to fix tubes into shape
- Place the end of each tube onto a patterned transparency or canvas, mark the outline
- Cut a bigger shape around the transparency or canvas
- Make small cuts diagonally from each edge so that you can wrap it onto the edge of a tube
- Tape transparency or canvas fabric to one end of each tube - you want it to be as flat as possible
